

Reveal Locations. Understand patterns. Respond with confidence.

Gain insights into communication patterns, identify top contacts and predict meeting points with advanced AI-driven call log analysis. Combine that with User Data Records (UDR).

Get the full context: who's talking to whom, when, how often, and where that trail may lead.

CDR Enrichment Who's connected and how.

Top Associates: See the most frequent and significant connections.

AI Pattern Detection: Surface unusual spikes, time gaps, or changes in call behaviour.

Potential Meeting Points: Predict where key contacts are most likely to meet based on historical movement and call timing.

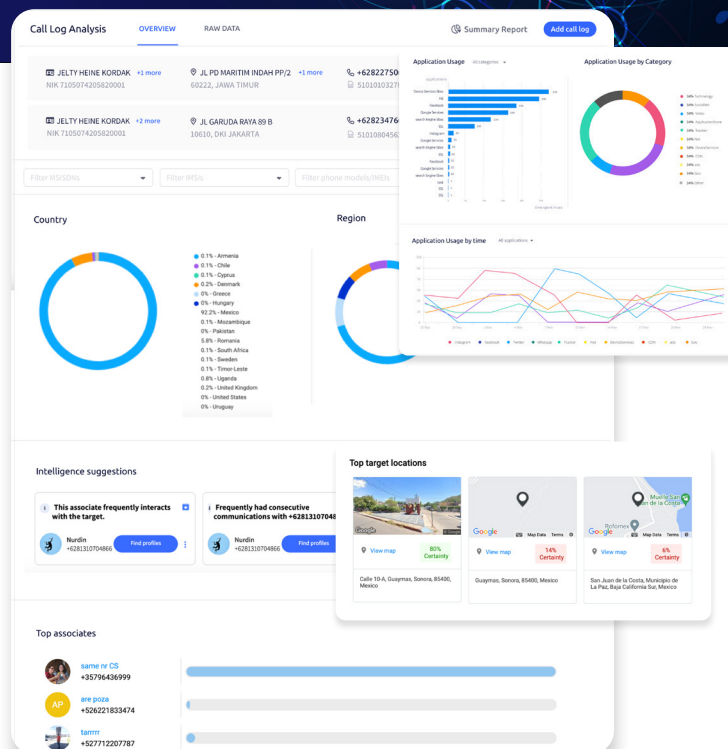

Visual Intelligence Make sense of complex data faster.

Heatmaps of call and data activity.

Timeline chart to identify interactions and behavioural shifts over time.

Duration analysis for meaningful insights.

Link Analysis for data correlation between numbers with drag and drop option.

User Data Records See how data moves and understand habits.

Data Usage Patterns: View timestamps and volume of cellular data sessions.

Online Activity Trends: Discover which applications and services are most accessed via mobile data.

Locations Accessed via Mobile Data: Uncover physical locations linked to data activity.

AI Actionable Insights Let the system surface what matters.

- ✓ Get automated alerts based on unusual communication patterns.
- ✓ Spot spikes in activity, unexpected contacts, or strange data usage.
- ✓ Focus on high-risk behaviour without sorting through everything manually.
